

Repositionable 3M™ Red Dot™ Soft Cloth Monitoring Electrodes (2660/2670)

For your most demanding applications, our 2660/2670 monitoring electrodes, with a full coverage conductive surface area, provide improved trace quality.

Larger conductive area.

The conductive surface area of our Red Dot Repositionable Monitoring Electrodes is larger than that of conventional electrodes. This results in improved ECG trace quality.

Comfortable and conformable.

The low-profile, soft cloth backing provides ease of application and removal, improves patient comfort and reduces the risk of electrodes catching on medical devices, drapes, gowns or bedding.

Adhesion choices.

Red Dot Repositionable Monitoring Electrodes are available in two levels of adhesion. Both are quick to stick on skin and gentle on removal, but the Red Dot Repositionable Monitoring Electrode 2670 is the preferred choice when more aggressive adhesion is needed.

3M™ Red Dot™ Repositionable Monitoring Electrode 2660 - Radiolucent
